                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 15,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 2,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 25, Ap

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 15632,

The present invention relates to a translational reporter vector selected from p2luc and p2luci. The vectors have a polylinker interposed between a remilla luciferase gene and a firefly luciferase gene, which are out-of-frame with respect to each other but are co-expressed upon recoding. The translational reporter vector is useful for assaying translational recoding in vitro or in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Translational reporter vector for quantification of translation recoding in vivo and in vitro, comprises renilla luciferase gene, polylinker for insertion of selected DNA and an out-of-frame firefly luciferase gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Na-K-2Cl cotransporter; NKCC2; human; Bartter's syndrome;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                           The present invention describes a number of phosphorothicate antisense sequences to the human focal adhesion kinase (FAK) protein. This protein is involved in integrin-mediated signal transduction, and is implicated in cancer, particularly colon, breast and oral tumours, embryonic development disorders, angiogenic disorders and wound healing. The antisense sequences, including the one shown here, can be used in the treatment of all of these.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a number of phosphorothioate antisense sequences to the human focal adhesion kinase (FAK) protein. Primers murFl (AAT63363) and murF2 (AAT63364) were used to amplify the Escherichia coli murF gene (see also AAT63360) and were designed so as to allow in-frame fusion of the murF coding sequence to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                               The specification describes an intercellular adhesion molecule (ICAM)-6 polypeptide. The ICAM-6 polypeptides and polymelocities can be used for drug screening and developing products for therapy involving intercellular adhesion, e.g. in inflammatory processes. The products can also be used for detection, diagnosis and the production of transgenic animals. PCR primers AAX36170-73 were used in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Culture system for stable high yield production of recombinant plasmids - using bacteria with modified chromosome that can survive only when plasmid is present and optionally foreign DNA expressible only in eukaryote(s)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                            Thiazide sensitive cotransporter, ATP sensitive K channel and NaK2C1 cotransporter genes - useful for developing products for the diagnosis and treatment of ion transport disorders, e.g. Gitelman's Syndrome or Bartter's Syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Primers hNKCC2ex24 forward and reverse (see AAV45725 and AAV45726, respectively) are designed to amplify exon 24 of the human NKCC2 gene (see AAV40562) that codes for Ne K-21 cotransporter NKCC2 protein (see AAV43683). Both primers are located within introns of the gene. 27 Sets of specific primers (see AAV45677-V45730) were used for SSCP analysis of NKCC2. Amplified products were analysed for molecular variants by electrophoresis, and identified variants was demonstrated. Identification of the molecular basis of Bartter's syndrome with NKCC2 Bartter's syndrome allows for the genetic diagnossis of this disorder. The invention provides products and methods useful for diagnosis and treatment of Bartter's syndrome and other ion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Intercellular adhesion molecule 6; ICAM-6; drug screening; therapy; intercellular adhesion; inflammatory process; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PCR primer used to amplify a fragment of ICAM-6 nucleic acid.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PCR primers AAV42720-21 were used to amplify human furin cDNA (see AAV42731). The amplified product is used in the retroviral vector of the invention to encode a cell bound prodrug convertese for ablation therapy. The specification describes a gene delivery vehicle which directs expression of a non-immunogenic selectable marker or molecule which is capable of activating a previously inactive compound. Vectors expressing the markers and a heterologous sequence are useful in gene therapy. The vectors can be used to deliver a molecule into a target area where it may cause the activation of a previously inactive substance.
                                                                                                                Gaps
murE promoter. The murE promoter was subsequently amplified (see also AAT63185-66). An E. coli strain was constructed with an irreversible alteration (deletion) in its murF gene. This can be used for large-scale prodn. of recombinant plasmids.
                                                                                                                                                                                                                                                                                                   Retroviral vector; gene delivery vehicle; expression; PCR primer; non-immunogenic selectable marker; gene therapy; activation; human; furin; ablation therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Non:immunogenic pro:drug activating enzyme(s) and selectable marker(s) - are used in gene therapy for the treatment of a wide variety of disorder(s)
